

## CURVED PARTS FOR YOUR C-ARM AND MRI-EQUIPMENT

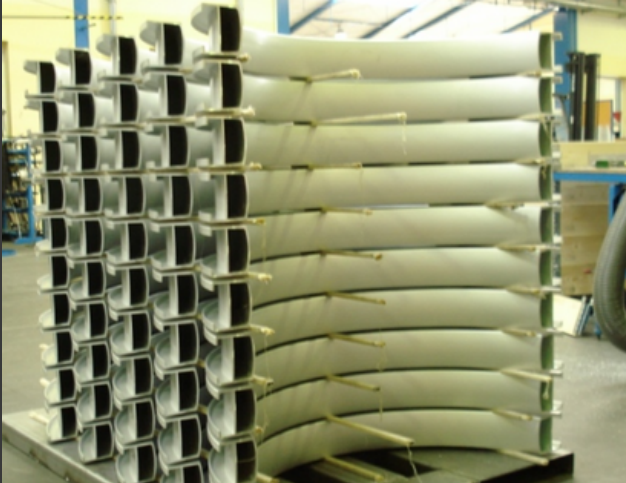

The C-shaped curve is a major characteristic of the medical C-arm. These C-arms play a crucial role in intraoperative imaging, facilitating real-time monitoring of surgical procedures and enabling timely adjustments, if necessary, potentially preventing the need for additional surgeries.

It all starts with some high quality extrusion profiles made from aluminum. The shape itself needs to be bent on the highest possible quality level since you will need to avoid any bad performance related to that during the usage of your C-Arm.

## Why is it important, and what are the benefits for you?

At Sjolund we have a long tracking record and huge experience to realize such components together with our clients, so it will be easy for you to realize new projects together with our team.

You will benefit from the experience that Sjolund Group has gained on curved equipment over the last decades. The curved parts that we are supplying to you, are ready to install kits of curved profiles that will have full traceability and the packing will be individually according to your needs. If you seek a steady supplier committed to delivering components as promised and on time, Sjølund welcomes your inquiry. Let's collaborate to build a future of precision and partnership together!
